

Living Cell Technologies Limited Company Announcement

LCT appoints investment banker as new Chairman of the Board

20 July 2011: Sydney, Australia, Auckland, New Zealand. Living Cell Technologies Limited (ASX: LCT; OTCQX: LVCLY), a global company pioneering the development of cell implants to treat diabetes, announced today that Mr Roy Austin, a current Director of LCT, has been elected Chairman of the Board.

This appointment is appropriate as the company moves to commercial development based on the excellent results emerging from its advanced clinical trials in humans with Type 1 diabetes. Mr Austin has extensive experience in licensing, establishing joint ventures and partnerships in his position as a Principal of Northington Partners.

His knowledge of the biotechnology field stems from his chairing of Cure Kids, a major highly successful charity, seeking better treatments and preventive measures for sick children. He directly influenced the formation of Cure Kids Ventures, the commercial arm of the charity, aimed at bringing academic research into viable commercial use.

Mr Austin also advised LCT concerning company financing during its formative years and is well acquainted with the science and financial background of LCT.

About Living Cell Technologies - www.lctglobal.com

Living Cell Technologies (LCT) is developing cell-based products to treat life threatening human diseases. The Company owns a biocertified pig herd that it uses as a source of cells for treating diabetes and neurological disorders. For patients with Type 1 diabetes, the Company implants lead product DIABECCELL, microencapsulated islet cells, so that near-normal blood glucose levels may be achieved without the need for administration of insulin or at significantly reduced levels. The Company entered clinical trials for its diabetes product in 2007. For the treatment of Parkinson's disease and other neurological disorders, the company transplants microencapsulated choroid plexus cells, NTCELL, which delivers beneficial proteins

and neurotrophic factors to the brain. LCT's breakthrough microencapsulation technology, IMMUPEL, enables healthy living cells to be injected into patients to replace or repair damaged tissue without requiring the use of immunosuppressive drugs to prevent rejection. LCT also offers medical-grade porcine-derived products for the repair and replacement of damaged tissues, as well as for research and other purposes.
