TOTAL NEW CONTRACT VALUE

Total new contract value represents the total value of the contracts entered into by the Group during a specified period. The value of a contract is the amount that the Group expects to receive under the contract after its performance in accordance with the terms as set out therein. For contracts denominated in currencies other than RMB, the average exchange rate of the month in which the contract is entered into is mainly adopted in calculating the estimated contract value expressed in RMB.

TOTAL BACKLOG VALUE

Total backlog value represents the estimated contract value (net of estimated value-added tax) of existing legally-binding contracts that remain to be completed as of a specified date. Total backlog value is not an audited measure defined by International Financial Reporting Standards and our method of determining the total backlog value may not be comparable to those adopted by other companies. Total backlog value may not necessarily reflect the future operating results of the Company, and the degree of difficulties in performing the contract may result in inaccurate final income from the backlog contracts.

The Board wishes to emphasise that the above total new contract value and total backlog value are based on the Group's unaudited management accounts, and such information has not been audited or reviewed by the Company's auditor and may be subject to adjustments. Such information is for reference only and does not constitute any forecast or prediction of the profits or financial results of the Group and should not be regarded as an indication of our future profits.
