Electricity Sold for the First Quarter of 2018

China Power International Development Limited (the “Company”) announces that based on the Company’s preliminary statistics, the combined total electricity sold of the Company and its subsidiaries (collectively, the “Group”) for the three months ended 31 March 2018 amounted to 15,604,599MWh, representing an increase of 4.88% year on year.

The electricity sold in the first quarter of 2018 was higher than that of the corresponding period last year, mainly due to (1) severe cold weather during the period caused electricity demand for heat to increase, and (2) the newly operating wind power plants and photovoltaic power stations and the newly acquired photovoltaic power station contributed to the increase in the total electricity sold. However, the low rainfall during the period in the river basins where the Group’s hydropower plants are located, resulting in a decline in power generation, narrowed the year-on-year increase in the overall electricity sales in the first quarter.

The total electricity sold of the Group’s various types of power plants for the three months ended 31 March 2018 are as follows:
