

Three Units of Pingwei Power Have Been Running on the Grid for Hundreds Days Continuously

As of September 11 2020, Unit 1, 5, 6 of Pingwei Power Company have continuously operated over 100 days on the grid safely and continuously, achieving the goal of “no provisional assays and no incurring unplanned outages for 100 days”, which is another new achievement in production safety following the continuous operation of Unit 4 for 445 days this year.

Each department of the Company collaborates to take proactive measures and arrange each shift for strengthening the on-site inspection and monitoring the adjustment of the equipment data; increasing the number of visits to the key parts of the site to discover and handle the hidden problem of the equipment timely. The maintenance department fulfills its duties and makes every effort to implement the responsibility system for production safety. The relevant departments proactively formulate the coal blending measures to strengthen the management of coal blending in all aspects.

At present, the Company carries out a labor competition to ensure that the units of the Company are in good operating condition and lay a solid foundation for each annual safe production tasks of the Company.
