

A QC Achievement of Changshu Power Generation Won a National Award

On 10 September, the QC achievement "Development of multi-channel analog signal testing device" of the third shift of the thermal control department of Changshu Power Generation Thermal Engineering Maintenance Department won the third prize of the QC Achievement Evaluation in the 2020 National Power Industry Excellent Quality Team Achievement Exchange Activity.

This activity was organized by the China Water Conservancy and Electric Power Quality Management Association. A total of 239 QC teams from power companies across the country participated in the exchange and evaluation. The QC results of the third shift of Chang Electric Thermal Control were among the best in the exchange activities held by the Jiangsu Electric Power Industry Association this year, and then was recommended to participate in this exchange activity.

In recent years, with the goal of improving the capabilities of grass-roots innovation and quality management, Changshu Power Generation has actively promoted teams and groups to carry out innovative activities in the form of QC groups. The results of QC teams and groups have repeatedly won national honors and obtained more than ten national patents. While training the team and improving management, it also allows the enterprise to reap tangible benefits.
