

SPIC Shanxi Company Achieves Good Start in Green Power Trading in First Quarter

SPIC Shanxi Company has completed new parity projects in the first quarter of 2024, with a total electricity of 90 GWh in 2024. The average transaction price is CNY 370/MWh, which is 11.45% higher than the benchmark electricity price in Shanxi Province, and is expected to increase revenue by CNY 3.42 million. The inter-provincial centralized bidding for green power trading has made a good start.

Since this year, the company has been closely monitoring the green power trading window, taking the initiative to strike, obtaining green power trading qualifications for new parity projects for the first time, opening up trading channels, and improving the settlement power price through accurate forecasting, price adjustment, and matching high-price buyers, striving to maximize green power revenue.

Next, the company will focus on green energy consumption, actively participate in green electricity trading, develop users through multiple channels, explore green value, and safeguard the company's increase in both volume and price.
