

Chairman of ECEC Visits China Power Headquarters

On May 15th, Li Lixin, Chairman of East China Engineering Science and Technology Co., Ltd. ("ECEC"), and his delegation visited the headquarters of China Power to discuss the coordinated development of new energy and the chemical industry, green hydrogen energy, and green certification.

During the visit, representatives from China Power highlighted their recent efforts to implement state requirements for building a new power system. They emphasized their advancements in new energy storage, green energy consumption, green energy transportation, and color solar cells. China Power expressed hopes that the two parties would strengthen communications and cooperation, utilize their advantages in the sectors of new energy and chemical industry, and create a mutually beneficial and win-win development pattern.

ECEC's spokesperson praised China Power's practices in green and low-carbon transformation. He stated that they will cooperate with China Power to expand the application scenarios of green hydrogen, and hope to strengthen communications, broaden cooperation, and achieve significant breakthroughs in integrating new energy with the chemical industry.
