

## **China Power and Lianyungang Municipal Government Hold Symposium on Green Energy and Industrial Integration**

On May 16th, Gao Ping, President and Executive Director of China Power, met with Xing Zhengjun, Mayor of Lianyungang, and his delegation in ColorFuLead Power. The symposium focused on deepening locality-enterprise cooperation, advancing green energy initiatives, and promoting industrial integration.

Mr. Xing expressed gratitude for the warm reception from China Power and commended ColorFuLead Power for its innovative contributions to photovoltaic material recycling. He highlighted that full-color photovoltaic materials, beyond their power generation capabilities, offer significant added value and market potential. Mr. Xing emphasized that the green development of Lianyungang City relies on such cutting-edge technologies. The municipal government hopes ColorFuLead Power will leverage its technological strengths, explore effective implementation strategies for new technologies, and contribute to building a green city in Lianyungang.

Mr. Gao welcomed the Mayor and his delegation, affirming that ColorFuLead Power, as a new industry under China Power, will continue to drive technological and business model innovations. He stressed the importance of adapting to new circumstances, strengthening communication and cooperation with the municipal government and other social organizations, and developing standardized products and application scenarios. Mr. Gao emphasized the use of data-driven methods to accurately grasp market demand, ensuring that the company's products achieve broader market acceptance with enhanced comprehensive value and core advantages. This, he noted, would lay a solid foundation for the promotion and application of full-color optoelectronic materials in Lianyungang City.
