

Qiyuan Green Power Passes CMMI-3 Certification

Recently, Shanghai Qiyuan Green Power Technology Co., Ltd. ("Qiyuan Green Power") successfully passed official CMMI certification and was rated at Level 3, signifying that it has fully met international standards in software technology development, research management, organizational support, and process improvement.

As a leading green transportation energy service provider in China, Qiyuan Green Power has promoted over 30,000 electric heavy-duty trucks and construction machinery vehicles and built over 800 charging and battery swapping stations, positioning itself as a pioneer and practitioner of energy-transport integration. This certification not only recognizes Qiyuan Green Power's achievements in digital development but also solidifies its continued leadership in the green transportation energy sector. CMMI, or the Capability Maturity Model Integration, is a globally recognized standard for assessing an enterprise's software engineering capabilities. It is considered a key certification for software platforms seeking entry into international markets, with its value and difficulty placing it among the top standards in the global software industry.
