

## **SPIC Shandong Energy's First Industry Standard Published**

SPIC Shandong Energy recently contributed to the development of its first power industry standard, *Specification of Technical Inspection and Testing Technology for Electric Power Civil Engineering* (DL/T 5710-2023), which has now been officially published and implemented.

The standard, led by the China Electricity Council and approved by the National Energy Administration, establishes guidelines for managing inspection and testing activities in civil engineering for power construction projects, including those in the renewable energy sector. It provides a solid foundation for ensuring the quality of inspection and testing processes.

The company has prioritized technical management in recent years, encouraging staff to conduct research and enhance their professional capabilities. This achievement underscores SPIC Shandong Energy's leadership in the renewable energy sector.
