VOLUNTARY ANNOUNCEMENT

“AMPHOTERICIN B CHOLESTERYL SULFATE COMPLEX FOR INJECTION” OBTAINS DRUG REGISTRATION APPROVAL

The board of directors (the “**Board**”) of CSPC Pharmaceutical Group Limited (the “**Company**”, together with its subsidiaries, the “**Group**”) is pleased to announce that the “Amphotericin B Cholesteryl Sulfate Complex For Injection (50mg)” (the “**Product**”) developed by CSPC Ouyi Pharmaceutical Co., Ltd.* (石藥集團歐意藥業有限公司), a subsidiary of the Company, has obtained drug registration approval granted by the National Medical Products Administration of the People’s Republic of China, being the first-to-market generic of this product type in China.

Amphotericin B is a type of polyene antibiotic, and is one of the most effective drugs with the broadest antimicrobial spectrum for prevention and treatment of invasive fungal infections. The Product is indicated for the treatment of patients with invasive fungal infections, patients where renal impairment or drug toxicity precludes the use of effective dose of amphotericin B or patients fail in prior amphotericin B deoxycholate treatment. Comparing with amphotericin B for injection used in clinical practice in China, the Product could significantly decrease nephrotoxicity and increase dosage, thus enhancing the therapeutic index. The approval of the Product will enable more patients to have chances to get treated or cured, hence having a better survival prognosis.

The approval of the Product will further diversify the Group’s product portfolio, representing a significant breakthrough of the Group in the field of invasive fungal infection treatment.
