VOLUNTARY ANNOUNCEMENT

SYH2068 INJECTION (A DOUBLE-STRANDED SMALL INTERFERING RNA DRUG) OBTAINS CLINICAL TRIAL APPROVAL

The board of directors (the “**Board**”) of CSPC Pharmaceutical Group Limited (the “**Company**”, together with its subsidiaries, the “**Group**”) is pleased to announce that SYH2068 Injection (a double-stranded small interfering RNA (siRNA) drug) (the “**Product**”), a Class 1 new chemical drug independently developed by the Group, has obtained approval granted by the National Medical Products Administration of the People’s Republic of China to conduct clinical trials in China.

The Product is an siRNA drug that achieves liver-targeted delivery through N-acetylgalactosamine (GalNAc) conjugation and targets lipoprotein(a) [Lp(a)] via subcutaneous administration, effectively reducing Lp(a) levels. The Product, indicated for the treatment of hyperlipoproteinemia (a), achieves a more sustained gene silencing effect through sequence optimization and chemical modification strategies. It is expected to become an ultra-long-acting siRNA drug for Lp(a) reduction, with the potential to prevent atherosclerotic cardiovascular disease (ASCVD). Preclinical studies showed that the Product exhibited superior pharmacological activity and duration of efficacy compared to similar siRNA products, and demonstrated differentiated advantages, such as long-lasting therapeutic effects, good safety profile and high patient adherence, providing a promising clinical development value.
