3 Hong Kong's 4G LTE Mobile Virtual Private Network launch facilitates secure and reliable data network service

New move makes comprehensive solutions available to enterprises

Hong Kong, 27 March 2014 - 3 Hong Kong, the mobile telecommunications division of Hutchison Telecommunications Hong Kong Holdings Limited (HTHKH; stock code: 215), today announced launch of a Mobile Virtual Private Network (VPN) that supports both 3G and 4G LTE services.

Starting today, corporate customers can use a mobile device anytime, anywhere to access their companies' information systems and applications securely via 3 Hong Kong's high-speed mobile data network. The new solution also allows customers to build their own "mobile offices".

High-speed 4G LTE network provides secure and reliable data transmission service

4G LTE Mobile VPN helps satisfy upwardly-spiralling mobile broadband demand from corporate customers by providing secure and reliable connectivity and data transmission to support a variety of business applications enabling corporate customers to trade securely anytime. An example would be the kind of internal system automation that allows field sales personnel to get orders processed. 3 Hong Kong's Mobile VPN is ideal for banks, financial institutions and enterprises running real-time mission-critical operations.

Corporate customers are also provided with a secure connection within a private network made available via public network infrastructure. This allows users to stay connected to an internal system and conduct business from anywhere. Such activities could include accessing documents, updating reports and taking part in webinars.

Customers can choose from a variety of secure Internet Protocol (IP) configurations, including fixed-public IP, fixed-private IP, dynamic-public IP and dynamic-private IP.

Flexible deployment of network resources

3 Hong Kong's Mobile VPN offers an efficient, flexible and convenient management service that enables enterprise IT departments to handle unforeseen and urgent business demands. These could include changing the number of employees able to use Mobile VPN, IP and Access Point Name (APN) resources. A customer service hotline for real-time assistance is available 24 hours a day and seven days a week.

Daniel Chung, 3 Hong Kong's Chief Technology Officer, said: "3 Hong Kong is dedicated to improving network quality, so that individual and corporate customers can enjoy a better overall mobile communications experience. Our Mobile VPN now supports both 3G and 4G LTE services, providing a cost-effective and price-competitive one-stop data network

capability that not only widens choice for customers requiring mobile enterprise solutions, but also consolidates our strengths in terms of providing highly-secure and reliable data transmission services."

3 Hong Kong has earned a reputation for meeting market needs through the innovative application of the latest technologies provided over a superior network. In an earlier move, 3 Hong Kong partnered with Samsung so customers can benefit from Samsung KNOX™, which separates billing for personal consumer and enterprise data use via a secure mobile platform.

Enterprises can now use 3 Hong Kong's Mobile VPN to connect mobile devices with internal systems through its high-speed mobile data network. Private channels can be established without investment in new network architecture. The end result is a competitively-priced set of flexible one-stop telecoms solutions and network services that help boost productivity and save cost.
